

Disease Control

KleenGrow™

DISEASE CONTROL ON GREENHOUSE ORNAMENTAL, FOLIAGE AND FLOWERING CROPS

KleenGrow™ is a blend of wetting agents and surfactants that can provide control of diseases such as *Powdery Mildew*, *Botrytis*, *Pythium*, *Phytophthora*, *Fusarium*, *Erwinia* and *Xanthomonas* through membrane disruption. **KleenGrow™** can safely be use on propagation, bulbs/seeds to finished crops.

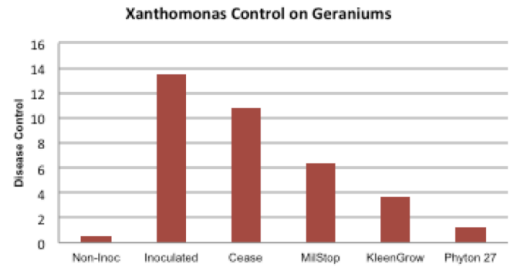

Bactericide: 7-14 day residual control provides more effective and longer control

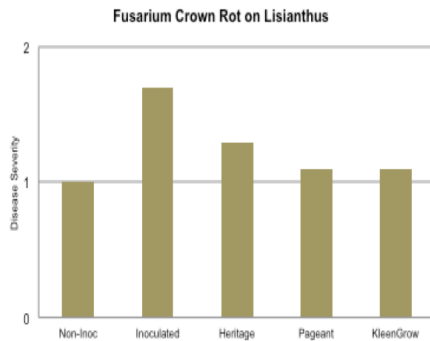

KleenGrow™ has residual activity in water. Since bacteria move within water, bacterial cross contamination can be kept under control when adding **KleenGrow™** to irrigation water or tank mixes either continuously or in weekly or in bi-weekly intervals.

KleenGrow™ is both curative and preventative depending on rate and frequency of applications. It is effective and safe to use in standard IPM, as well as safe to use in beneficial insect and mite IPM programs.

Dr. A. Chase provided research to support control of *Erwinia* and *Xanthomonas* at 6fl.oz/100 gallons.

Fungicide: Active in water and in soil on leaf, stem and root surfaces for broad-spectrum control.

Dr. A. Chase provided research to support control of *Fusarium* at 25fl.oz/100 gallons.

KleenGrow™ mode of action: membrane disruption. Provides the broad-spectrum control.

This unique mode of action can control life stages of pests found in water, soil, or on the plant's surface.

Tank Mixing: To increase microbial control and decrease cost.

1.0fl.oz/100gl Subdue Max

KleenGrow 12fl.oz/100gl + 0.5fl.oz/100gl Subdue Max

KleenGrow™ is an easy and cost effective product to add to your IMP program for multiple uses.

Use alone or in a tank mix with most fungicides, bactericide, insecticide or miticides. *Check compatibility chart before mixing.*
